

Andrei Khrennikov is professor of Department of Mathematics of Linnaeus University, Växjö, Sweden. He is director of the [International Center for Mathematical Modeling](#) (ICMM) applying mathematical modeling and computer simulations to multidisciplinary studies in physics, cognitive science, economics, social science, and engineering.

His research interests include foundations of quantum theory, quantum information, quantum measurements and quantum-like modeling of cognition as well as different psychological, sociological and economical phenomena. Andrei has more than 700 publications in various fields of applied mathematics and quantum physics. He has published more than 20 books in this field including

Ubiquitous quantum structure: from psychology to finances (2010), *Quantum Methods in Social Science: A First Course* (2017, together with E.Haven and T.Robinson) and *Social Laser: Application of Quantum Information and Field Theories to Modeling of Social Processes* (2020, to be published).

His professional work includes organizing a series of annual conferences on quantum foundations in Linnaeus University (since 2000) and Quantum Interaction series of biennale international conferences. He is one of the leaders in the world interdisciplinary physics community.
